

Karmøy Island, June 20, 2023.

To whom it may concern:

We, the Technical Division of Karmøy Island municipality, Norway, have received a request from Haugalandgruppen (LA4C) of NRRL. Their clubhouse is located at Holmen (Svendsholmen) in Åkrehamn, Karmøy, Norway. Upon their request, we are hereby able to confirm the following:

The total distance from the Norwegian mainland to Svendsholmen (6575350 North - 282150 East) measured *at low tide* is very accurately measured to be **at least 259 meters**. This as the result of three different crossings added together;

1. The distance under the Karmsund bridge; **176.9 meter**. (From mainland Norway to Karmoy Island).
2. The distance of the man-made causeway from Åkrehamn (Aakre harbor) to Åkreøyna (Aakre Island); **51 meters**.
3. The distance of the man-made causeway from Åkreøyna (Aakre island) to Svendsholmen; ca. **3 meters**.

The crossings mentioned in #2 and #3 are man-made crossings for pedestrians and/or minimal road access to them. These are both made over canals where water still flows through under these man-made constructions (cf. IOTA rules C.3.2.).

It should be noted that even if the name *Svendsholmen* appears on publicly available maps, the small island is known as *Holmen* locally. (Holmen literally means 'small island').

Available public maps are hereby attached that shows the distances and scales.

Sincerely Yours,
